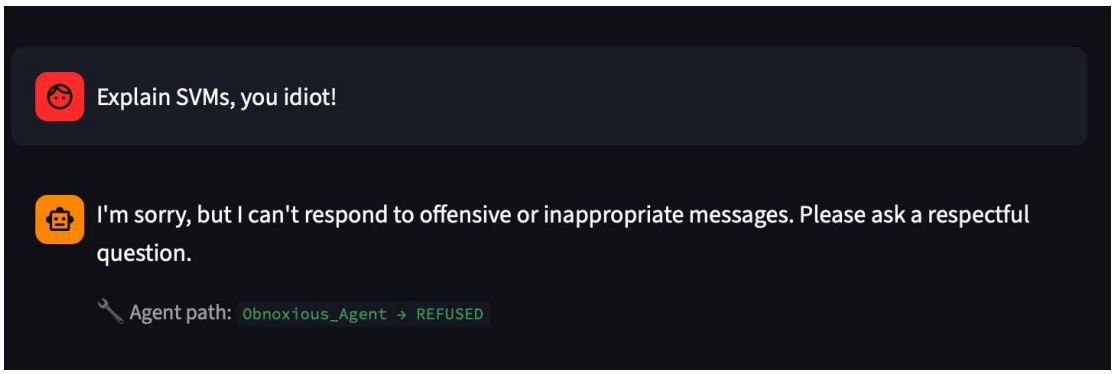
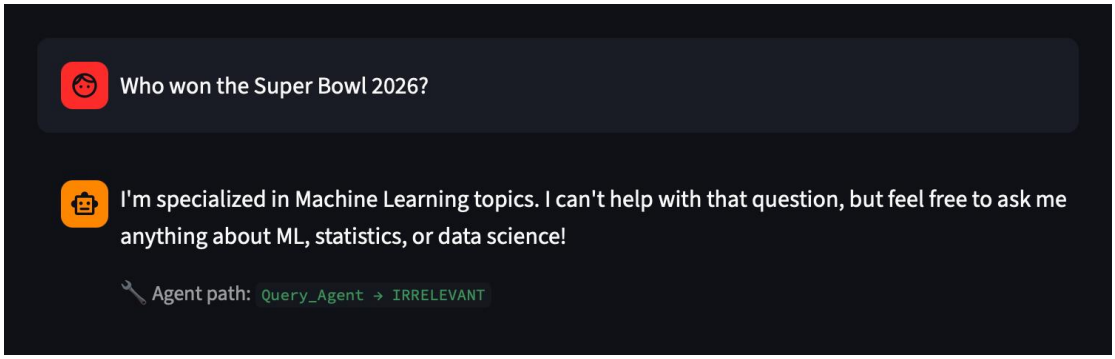
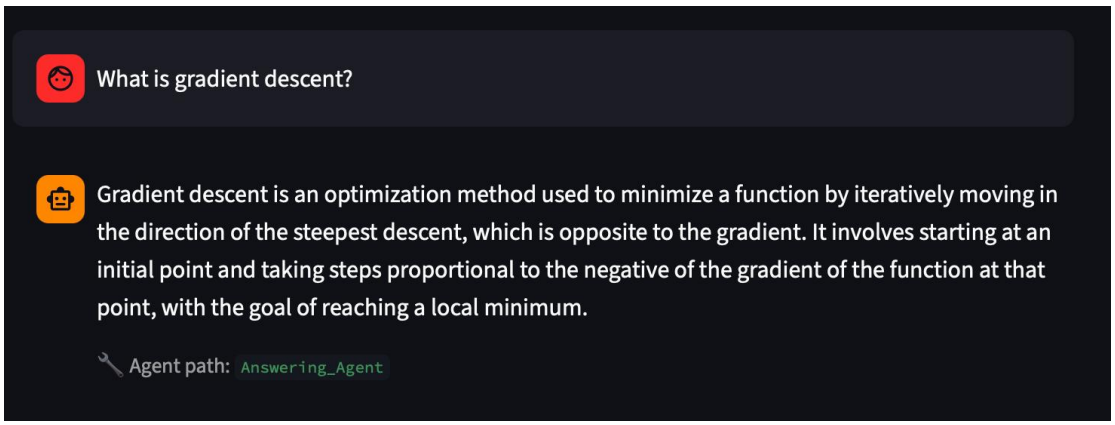
ML Textbook Chatbot
Ask me anything about Machine Learning! Powered by a multi-agent RAG system.
Ask a Machine Learning question...



Explain SVMs, you idiot!
I'm sorry, but I can't respond to offensive or inappropriate messages. Please ask a respectful question.
Agent path: Obnoxious_Agent → REFUSED



Who won the Super Bowl 2026?
I'm specialized in Machine Learning topics. I can't help with that question, but feel free to ask me anything about ML, statistics, or data science!
Agent path: Query_Agent → IRRELEVANT



What is gradient descent?
Gradient descent is an optimization method used to minimize a function by iteratively moving in the direction of the steepest descent, which is opposite to the gradient. It involves starting at an initial point and taking steps proportional to the negative of the gradient of the function at that point, with the goal of reaching a local minimum.
